FUTURE SCOPE OF ENGINEERING

- OUR TEAM MEMBERS:-
- DIVYANK RAJ
- SATYAM KUMAR
- MANISHRAJ GUPTA
- SATYAM KUSHWAHA
- COLLEGE :NSIT ,BIHTA PATNA

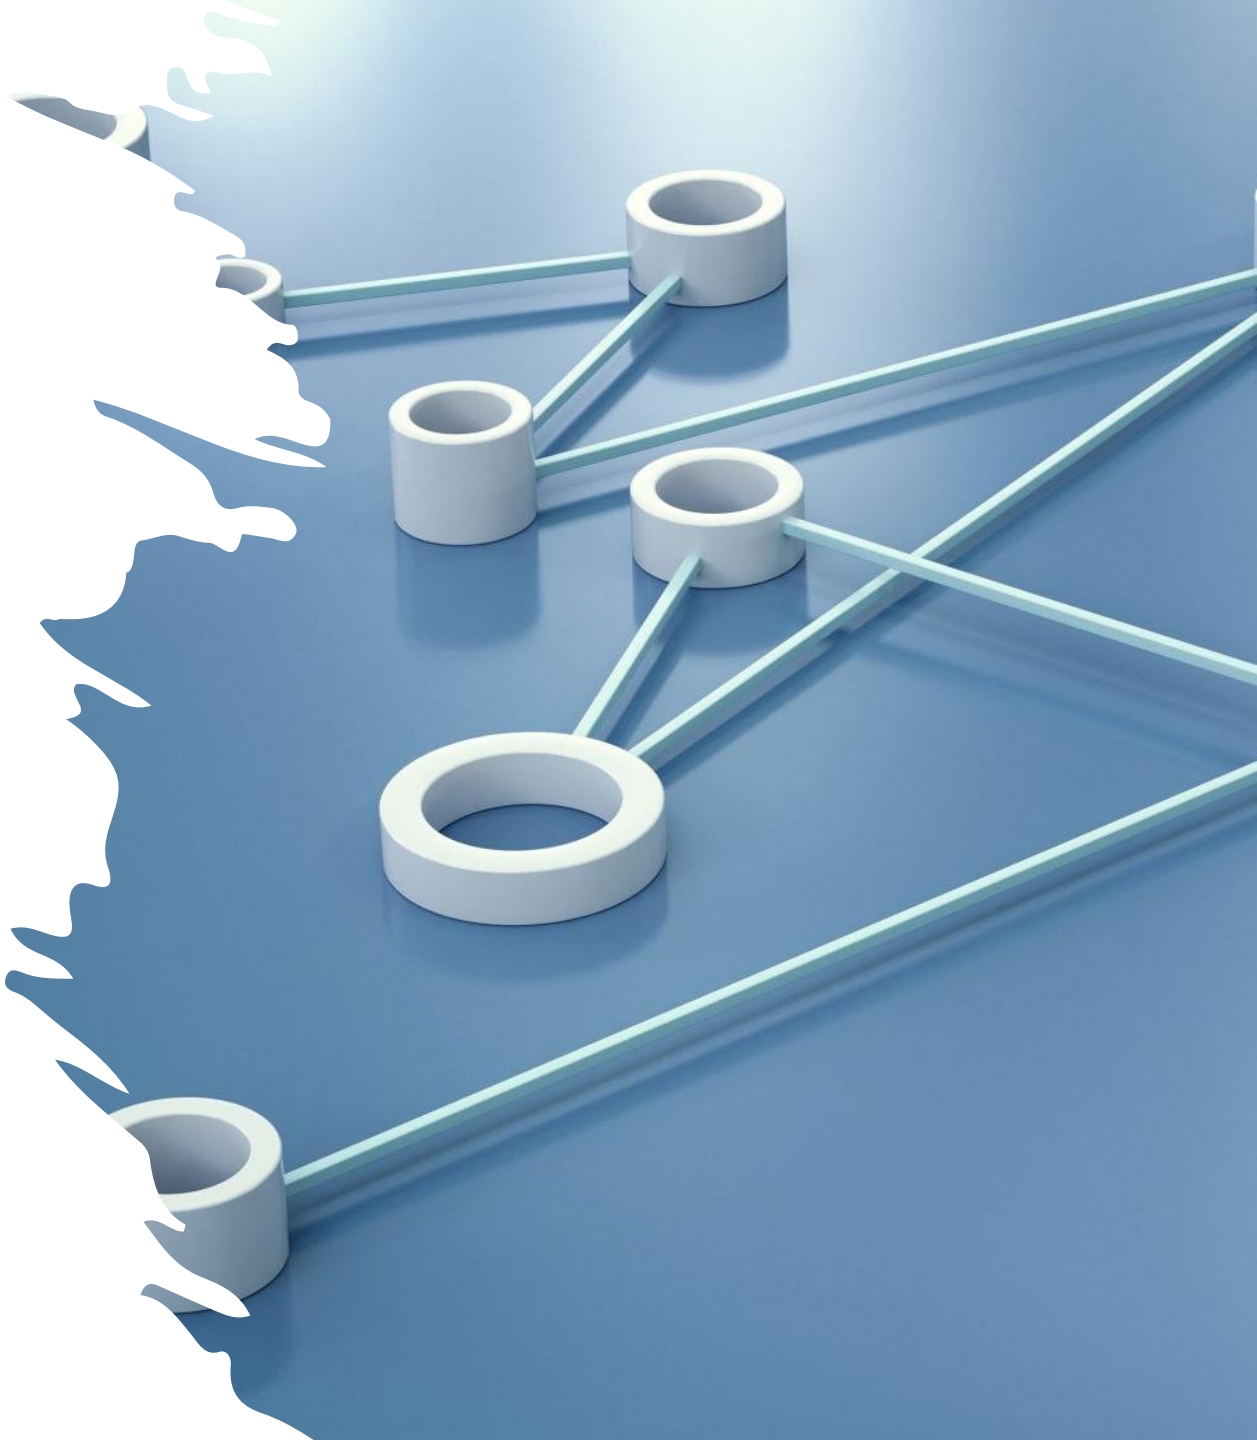

INTRODUCTION

- Engineering converts scientific knowledge into practical solutions.
- * Engineers shape modern life through technology, infrastructure and innovation.
- * The future of engineering will focus on sustainability, intelligent systems and human-centered
- technology.

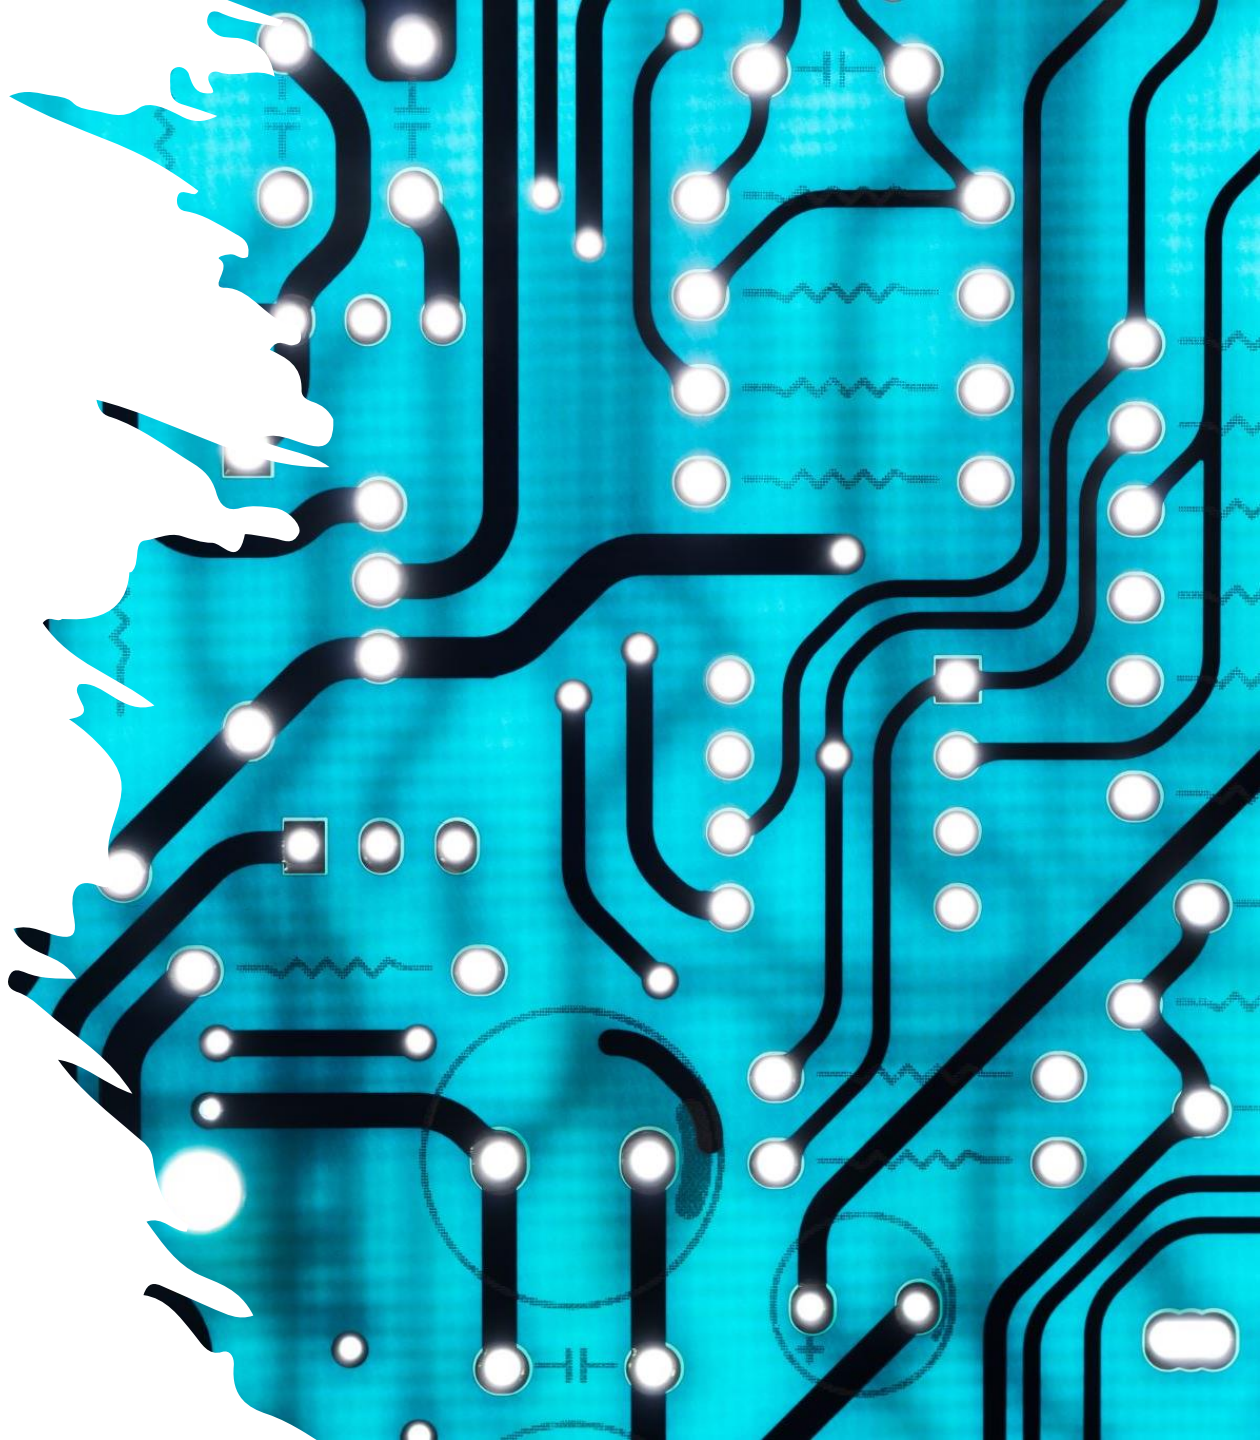

WHY ENGINEERING MATTERS

- Solves real-world problems in health, transport, communication and energy.
- * Creates new technologies and improves existing systems.
- * Supports economic growth, entrepreneurship and employment.
- * Helps society respond to climate and resource challenges.

MAJOR FUTURE AREAS

- Artificial Intelligence & Machine Learning
- * Robotics & Automation
- * Renewable Energy & Green Engineering
- * Cybersecurity & Digital Infrastructure
- * Semiconductors & Advanced Computing
- * Biotechnology & Healthcare Engineering

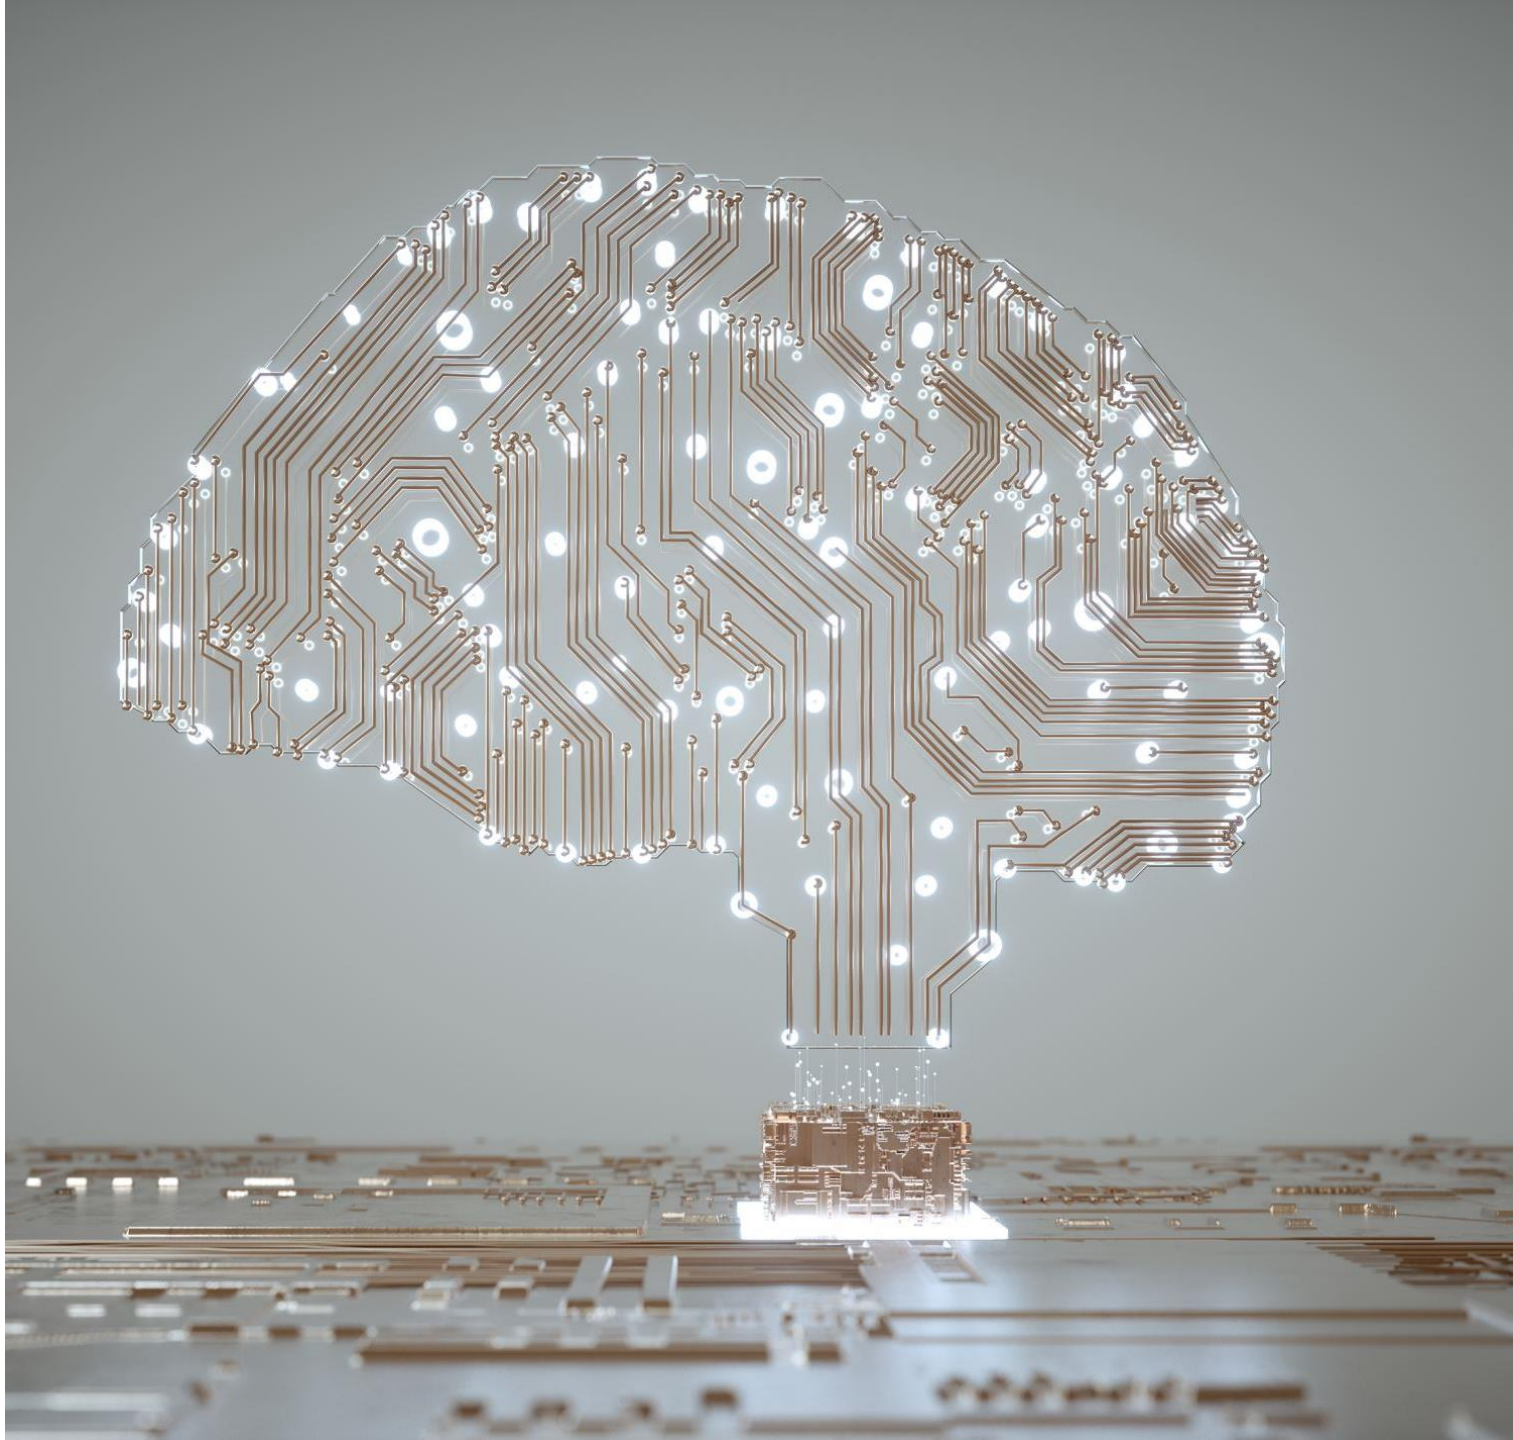

ARTIFICIAL INTELLIGENCE & ML

Intelligent software will assist in education, healthcare, finance and industry.

* Engineers will build reliable, secure and responsible AI systems.

* Skills: programming, mathematics, data structures, machine learning and problem solving

ROBOTICS AND AUTOMATION

- Robots will increasingly support manufacturing, logistics, agriculture and hazardous work.
- * Human-robot collaboration will become more important.
- * Engineers will combine sensors, control systems, AI and mechanical design.

GREEN AND SUSTAINABLE ENGINEERING

- Solar, wind, storage and smart-grid technologies will expand.
- * Energy-efficient buildings, transport and manufacturing will be increasingly important.
- * Circular design will emphasize reducing waste and reusing materials.

CYBERSECURITY AND ADVANCED COMPUTING

- Connected systems require stronger security and privacy.
- * Cloud, edge computing and high-performance computing will enable new services.
- * Engineers will need to understand both technology and digital ethics.

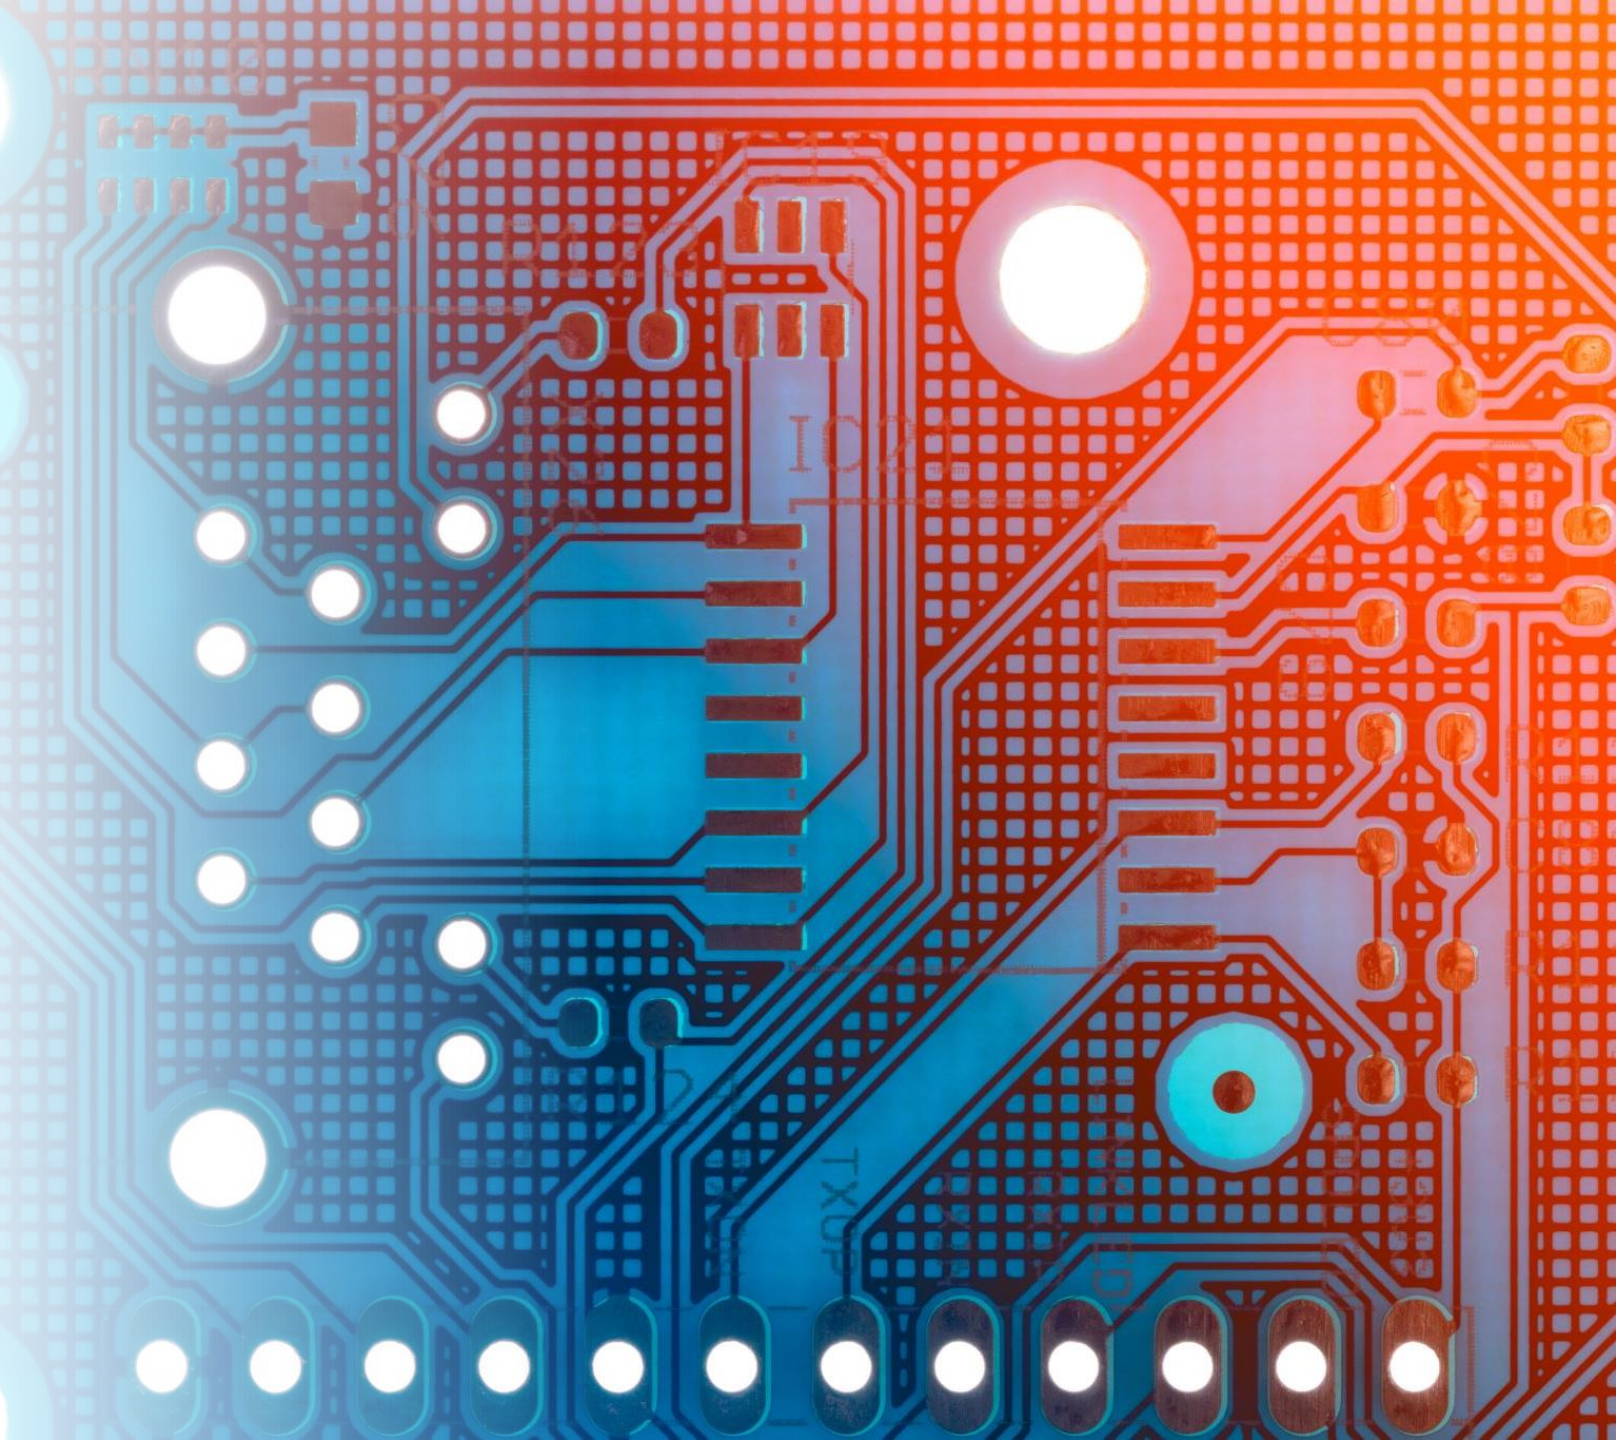

SKILLS FOR FUTURE ENGINEERS

- Strong fundamentals in mathematics, science and engineering.
- * Programming and digital tools.
- * Communication, teamwork and presentation skills.
- * Creativity, critical thinking and continuous learning.
- * Ethics, sustainability and responsible innovation.

CARRIER & ENTREPRENEURSHIP OPPORTINITIES

- Software and AI engineering
- * Robotics and automation
- * Energy and environmental engineering
- * Semiconductor and electronics industries
- * Cybersecurity and cloud technologies
- * Research, startups and technology entrepreneurship

CONCLUSION

The future of engineering is interdisciplinary, digital and sustainable.

* Engineers will not only build technology—they will help design solutions for society.

* The best preparation is strong fundamentals + practical projects + lifelong learning.

THANK YOU ALL OF MY TEAM MEMBERS AND OUR PROFESSORS

HAPPY ENGINEERS DAY

PRESENTED BY MANISHRAJ GUPTA
