

ARTIFICIAL INTELLIGENCE

PROJECT PROPOSAL

Here is where your presentation begins

PRESENTED BY : RAJ CHAUHAN
SANIYA KUMARI
ANURADHA SINHA
PRIYANSHU PRAKASH

GUIDED BY : MR. SUMANT KUMAR

NETAJI SUBHAS INSTITUTE OF TECHNOLOGY

AMHARA, BIHTA

An Ultimate Source of Technology

CELEBRATING

ENGINEERS' DAY 2026

15TH SEPTEMBER 2026

THEME 2026

ENGINEERING THE FUTURE

— IDEAS **TODAY.** IMPACT **TOMORROW.** —

WE DON'T JUST FOLLOW THE FUTURE,

WE ENGINEER IT.

INNOVATE CREATIVELY | DESIGN THOUGHTFULLY | BUILD STRONGLY | SUSTAIN RESPONSIBLY | EMPOWER SOCIETY

DREAM • DESIGN • DEVELOP • DELIVER

Thank you Engineers for building a better tomorrow!

ARTIFICIAL INTELLIGENCE

Understanding the Technology Reshaping Our World

A concise look at how machines learn, reason, and create — and what it means for people, business, and society.

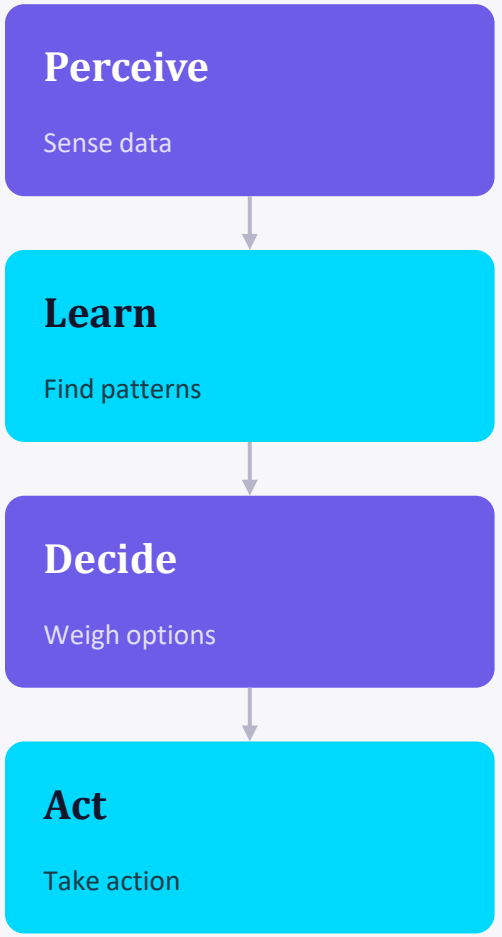

2026 BRIEFING

WHAT IS AI

Machines that sense, reason, and act

Artificial Intelligence is the branch of computer science focused on building systems that perform tasks which normally require human intelligence — recognizing images, understanding language, making decisions, and solving problems.

Rather than following rigid, hand-written rules, most modern AI systems learn patterns directly from data, improving as they see more examples.

BRIEF HISTORY

Seven decades of progress

1950

Turing Test

Alan Turing proposes a test for machine intelligence.

1997

Deep Blue

IBM's chess computer defeats world champion Garry Kasparov.

2012

Deep Learning Boom

Neural networks trained on GPUs surge past older methods.

2022

Generative AI

Chatbots and image generators bring AI to everyday users.

CLASSIFICATION

Three levels of machine intelligence

1

Narrow AI

Built for one task — image recognition, translation, or recommendation. Every AI in use today falls here.

2

General AI

A hypothetical system that matches human ability across any intellectual task. Not yet achieved.

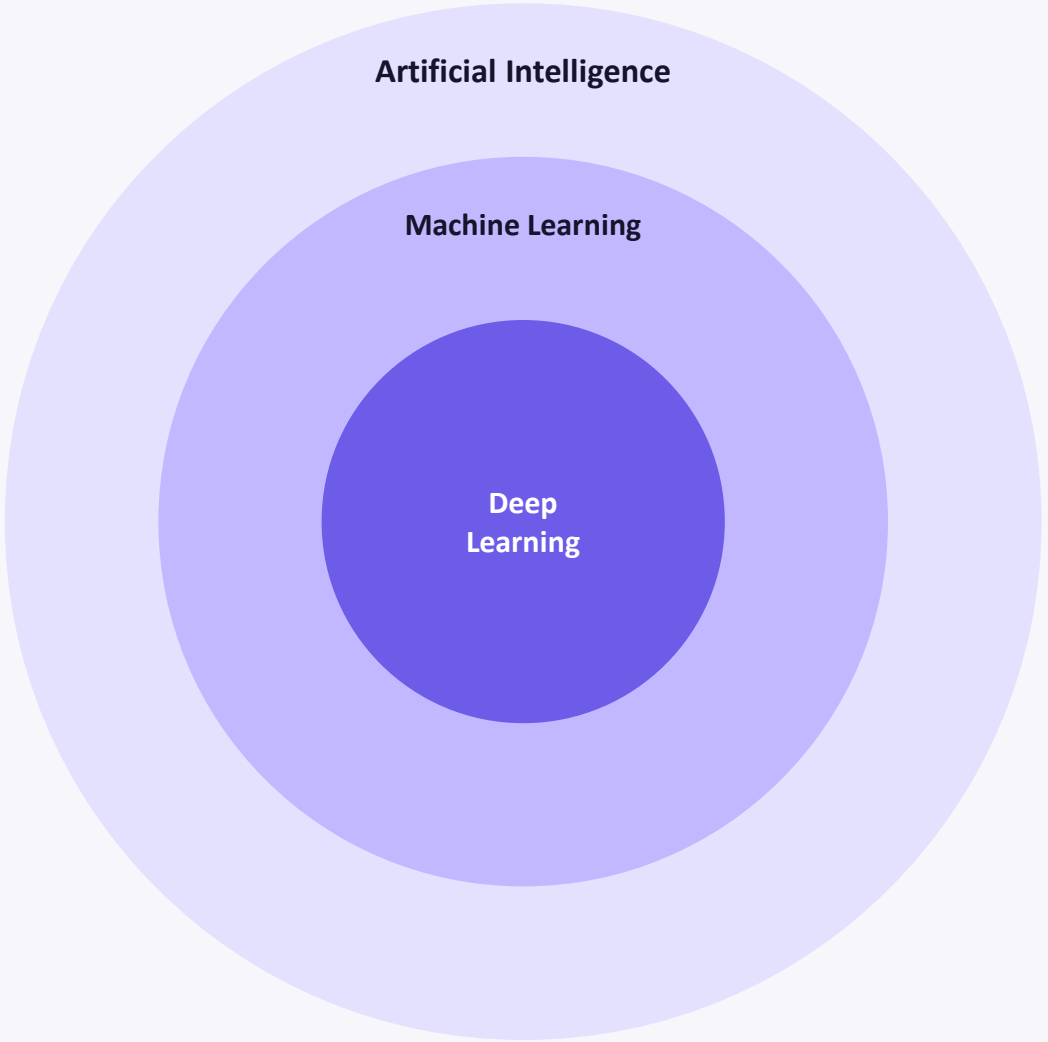

3

Super AI

A theoretical intelligence exceeding human capability in every domain. Remains speculative.

HOW IT FITS TOGETHER

AI, machine learning, and deep learning

Artificial Intelligence

The broad field of making machines act intelligently.

Machine Learning

A subset where systems learn from data instead of fixed rules.

Deep Learning

A subset of ML using layered neural networks for complex patterns.

REAL-WORLD IMPACT

Where AI already shows up

H Healthcare

Diagnostic imaging, drug discovery, personalized treatment plans.

$ Finance

Fraud detection, algorithmic trading, credit risk scoring.

T Transport

Route optimization, driver-assist and autonomous vehicles.

E Education

Adaptive tutoring, automated grading, content generation.

M Manufacturing

Predictive maintenance, quality inspection, robotics.

P Entertainment

Recommendation engines, procedural content, editing tools.

A NEW WAVE

Generative AI creates, not just predicts

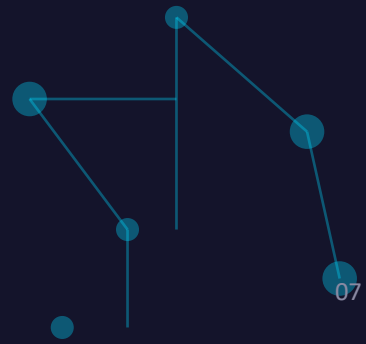

Generative models produce new text, images, audio, and code by learning the statistical structure of massive datasets — then sampling from what they've learned.

This shift moved AI from a back-office tool into something people interact with directly, every day.

100M+
weekly users of AI chat tools

50+

typical response latency

WHY IT MATTERS

Benefits driving adoption

Speed	Processes vast data and completes tasks far faster than manual work.
Accuracy	Reduces human error in repetitive, detail-heavy tasks.
Availability	Operates continuously, offering support around the clock.
Personalization	Tailors recommendations and experiences to each individual.

THE OTHER SIDE

Challenges that need attention

Bias

Models can inherit and amplify bias present in training data.

Privacy

Large-scale data use raises questions about consent and surveillance.

Job Shifts

Automation changes the mix of skills the labor market demands.

Safety

Powerful systems need robust oversight, testing, and guardrails.

LOOKING AHEAD

AI will keep changing how we work and create

The technology is still young. The organizations and individuals who learn to use it thoughtfully — with attention to both its power and its risks — will shape what comes next.

Thank You
